Don't Let This Scare You...

You don't *need* all this tech to work with React and Flux.

Our Goal

Just type "gulp", get all this!

- Compile React JSX

- Lint JSX and JS via ESLint

- Bundle JS and CSS files

- Migrate the built app to the dist folder

- Run a dev webserver

- Open the browser at your dev URL

- Reload the browser upon save

Want a Shortcut?

Completed Environment Setup: github.com/coryhouse/react-flux-starter-kit

In this module, we'll install and configure:

- Node

- Browserify

- Gulp

- Bootstrap

- ESLint

Environment Setup

Install necessary dependencies

We Did It!

We installed and configured:

- Node

- Browserify

- Bootstrap

- ESLint

- Gulp with tasks for builds, file watches and automatic reloads
